## 1. Introduction

This project attempts to create a open/free editor for the Clavia Nord Modular and Micro Modular synthesizers. Please note that this site and the whole project is still in developing stage.

On 2 December Clavia announced the following:

*Despite earlier information, Clavia has today decided to stop the work of the software upgrade for the Nord Modular system. Instead, Clavia will focus its development resources on new projects.*

And thus we-the-people decided to create and free/open source editor.

### Note:

Help from anyone is more than welcome! If you are interested just send an email to the mailing list.

## 2. Latest News

**Website update February 2008**  
JPDL2 documentation.

**Website update June 2007**

**Website update August 2006**
